## Preparing Your Slides For Scanning

### Organization

If your slides are in plastic notebooks holders or in non-Kodak compatible carousels, you will have to take them out and put them in stacks to organize them. Bell & Howell Cubes are okay but you still have to orient the slides correctly in the cubes.

Place your slides into your different stacks, in order. The next step would be to figure out what side of the slide will be "up" in the stack. Our general rule would be that the "Logo" side of the slide should face UP in your stack of slides.

*This has nothing to do with the way you view the slides or how the images will view on your computer or TV; it is for our scanning purposes.* The **bottom** slide in each stack will be the **last** in the folder or "chapter." The **top** slide will be the **first** slide in the folder. So, you would start your stack with the last slide being down on the table and then you would build your stack from there.

The top slide and all the slides under it will have the **logo facing UP**. If you were to pick up one of these slides and you saw a sign in the picture, the text would read ЗДРАВСТВУЙТЕ. This would be correct. Don't worry. After scanning, we get everything facing correctly. You need to also turn your "portrait" slides so that they are oriented the same as the "landscape" slides. Once again, we will fix this.

*If order is important, put the numbers on the LOGO side of the slide.*

**Correct Slide Rotation**

**Incorrect Slide Rotation**

## Be Reasonable With The Size Of Your Stacks

This is a good set of stacks for 100 slides.

Our business is scanning slides and enhancing images.

Small stacks slow us down so that we are basically doing file management and not getting paid for it. It takes us away from scanning and Photoshop work.

These stacks also total 100 slides. Most of these stacks have less than 5 slides.

## We NEED You to Number Your Stacks of Slides

Please do NOT label your slide stacks with names or places or dates. We NEED you to number your stacks of slides. If you do not number your stacks, we will have to do it for you and, if it takes us extra time, we will have to charge you extra for that.

In some cases, your stacks might get too big. In that case, divide the slides up into more than one stack, like the slides for folder #2, above. We will know that you want the slides in stack 2A and 2B and even more, to go into folder #2 on your disk.

Directly Under that top stack label, should be the very first slide in that folder. Make sure you have all the slides facting correctly with the logo UP. The last slide in each stack will be the last image in the folder on your disk. If you use rubberbands, use at least two of them.

## Kodak Carousel Slide Orientation

If you have the slides in Kodak Carousels, you can save yourself a lot of time and trouble by just shipping us the whole carousel. Yes, you will pay a little more for shipping costs, but you will save yourself the time and trouble of taking the slides out and putting them into 2" stacks, labeling them, and rubber banding the stacks. **How much is your time worth?** Plus, you don't have to worry about rubber-bands breaking.

Look at the tops of your slides. The fronts should be facing "counter clockwise" when viewed from the top of the carousel. You can tell the front of the slide because it usually has the company logo or name of the film on it.

Fronts of slides face this way.

The backs of the slides look like this when viewed from the top. The backs will be identified as different from the fronts because they will be fairly blank and having maybe some faint numbers on them and possibly dates actually stamped into the slide holder. Some slides will even have "View From This Side" stamped on them. This is the back side.

Backs of slides face this way.

### Right.

All slides should be placed in the carousel like this.

### Wrong.

Rotate this slide in the carousel.

## Cleaning Your Slides

We see slides, every day, that would be greatly improved with a simple light brushing with a very soft cloth.

You have to be careful that there is nothing abrasive on the film or you will scratch it. Just imagine if there were sand on the film and it wouldn't matter how soft your cloth was. It is good for brushing off loose dirt but don't scrub with it.

## Bell and Howell Slide Cubes

The Top Slide in the Cube is 1st Slide in the pile and the slide show order.

This side towards screen and towards the top of the cube..

## These Containers Are Good

Wide Storage Box  
Slides close packed

Rubber Banded Stacks

Kodak Compatible Carousel

Metal or Plastic Storage Box  
No slides in slots.

Slide Cubes

Waxed Paper Sized Boxes

## These Are Extra Work For Us

These Are Containers That Are Difficult For Us to Work With

You can take them out or we can take them out for you, subject to our current pricing. We stack them and rubber band them. We do not put them back in containers.

Magazines

Narrow Storage Boxes

Sawyer Type Carousels

### Sawyer Type Carousels

You can identify a Sawyer type carousel by the open area in the middle & they hold 100 slides. Sawyer Carousels have the slides stuck in place. Tip the tray over and they will not fall out. In fact, they are hard to get out. They need to be stacked. If we have to take the slides out and stack them for you, there is a small charge for each slide.

Notebook Plastic Sleeve

They are made for the type of projector that turns the tray on its side, like a "ferris wheel" as opposed to a Kodak carousel that is like a "carousel" or merry-go-round.
